# Software Developer Full-Stack (m/f)

Full-Time Permanent Employment at the Earliest in Freigericht, Biebergemünd, Leipzig, Kaunas, Berlin or Bratislava

Your responsibilities

As a Software Developer you are responsible for a complex life-cycle of our software products. You accompany the whole process from the analysis of the requirements and the concept creation, over the creation of software designs, software implementation, documentation, software tests and system deployment.

Your profile

You are University graduate in computer science or comparable discipline and already have at least two years of working experience. Besides your enthusiasm for software development you also have understanding of software architecture, analytical thinking and ambitions for high quality standards.

As Software Developer Full-Stack you use your knowledge in Backend- as well in Frontend-technologies, in consideration of common design patterns and clean code standards. You must enjoy using agile development methods and appreciate the benefits of the source code management with Git and and a continuous integration toolchain.

In addition you are used to work independently and take responsibility for your projects. Your quick grasp, abstract thinking and analytical approach to problem solving are essential in your daily work. You also convince because of your friendly and open-minded personality and excellent team working skills. Good spoken and written German and English complete your profile.

Additional experience/skills would be an advantage:
* Developing of web applications (HTML, JS, CSS, preferably SPAs with Angular, Typescript)
* Developing of Backend-Services/ Web-Services (REST/ HATEOS, preferably in the .net toolset)

Company

The CID GmbH is a part of a fast growing and innovative group with the focus on emerging markets in the areas of business process optimization and information management. Currently our 200 employees from different countries are servicing a number of well-known customers in mail order, telecommunication, automobile and insurance industries. Together with partners in science and research CID uses latest knowledge for developing new ways for increasingly challenging information management, search and categorization.
